

Instructions to Compile and Run

Linux

1. Install Python 3.13 and required system packages:
2. Create a virtual environment and activate it:

```
python3.13 -m venv venv  
source venv/bin/activate
```

3. Install dependencies:

```
pip install -r requirements.txt
```

4. Download model file

```
./download_model.sh
```

5. Run the application:

```
python src/main.py
```

Windows

1. Install Python 3.13 from python.org
2. Create a virtual environment and activate it:

```
python -m venv venv  
venv\Scripts\activate
```

3. Install dependencies:

```
pip install -r requirements.txt
```

4. Download model file

Create a folder named “models” in the root of the directory then download from this url:

https://huggingface.co/Qwen/Qwen2.5-Coder-1.5B-Instruct-GGUF/resolve/main/qwen2.5-coder-1.5b-instruct-q4_0.gguf

and put it in that folder.

5. Run the application:

```
python src\main.py
```
